

Forensic Data Collection, Investigation & Audit

Effectively identifying and preserving data and documents to meet demands can be difficult.

The volume of time and resources necessary to respond can put significant pressure on any organisation regardless of how well-resourced and prepared, particularly if you don't have access to the right support.

Law In Order offers a 'one stop shop' in the global market covering the full spectrum of digital services for the legal profession including forensic collections and investigations, managed document review, eDiscovery, and eTrials and eArbitrations.

Our highly skilled and experienced team of Forensic specialists can assist at audit stage or in response to court dictated discovery or investigatory requests. The team can assist from our local branches or travel across the globe, attending on-site to minimise impact on your business.

Why Law In Order?

- ✓ We offer data collection services across a wide range of data sources and devices, using industry leading forensic software. This software we recommend improves drive acquisition speed while maintaining the integrity of the collected data.
- ✓ We meet all regulatory requirements. We use standard collection methodologies and chain of custody guidelines.
- ✓ Our Forensic experts have specialised technical knowledge gained through years of experience working closely with clients on matters such as fraud investigations, criminal offences, IP / identity thefts, employee misconducts, litigation and arbitration. They work across law enforcement, government agencies and the private sector. Our team have experience with matters of all sizes including cross-border eDiscovery matters involving multiple complex data sources.

Data Collection Process

Our services are very flexible and supportive. Our data collection processes can be scaled to the needs of the matter.

In addition, Law In Order is able to assist organisations with the development of a forensics collection work flow, and collection auditing.

Assisted self-collection using preconfigured devices and other remote collection services are also available.

Types of common forensic acquisitions include:

- **Hard drive and loose media** (i.e. PC's, Apple computers, Laptops, USB drives etc.)
- **Portable devices** (i.e. Mobile phones, Tablets, GPS, Drones etc.)
- **Network** (i.e. File Servers, Logical file locations)
- **Archived media collections** (Backup Tapes)
- **Cloud based repositories** (i.e. Gmail, Office 365 etc.)

Added Services

Our team can:

- Conduct in-depth analysis of acquired data to assist in uncovering findings of interest to clients, law enforcement and regulators
- Discuss any investigation you are conducting and help identify how electronic evidence can support your investigation
- Provide affidavits of the work we perform or act as an independent expert
